About

Senior Software Engineer

YANDEX, ALICE AI

Graduated in Applied Mathematics and Computer Science from the Faculty of Computer Science at HSE; studied at the Yandex School of Data Analysis.

Build production LLM agents.

Interested in distributed systems, infrastructure, and the reliability of ML systems.

Experienced with Python, C++, distributed services, and large-scale backend systems.

Experience

Yandex: Alice AI Agents Team

Moscow, Russia

SENIOR SOFTWARE ENGINEER

December 2025 - Present

Built one of the world's first production-grade LLM agents capable of autonomously booking beauty-salon services via APIs and websites using tool calling 📄

- Led full-cycle development: design, implementation, production rollout, and maintenance.
- Own the reliability of several agents in Alice. Designed and implemented monitoring, diagnostics, and automatic recovery mechanisms, ensuring a 99.99% SLA.
- One of the core developers of Yandex's shared SDK for AI agents.
- Developed key user scenarios, such as "book as usual" recurring bookings.
- Own the ethics and zero-bug policy of the booking agent.

Yandex: Software Engineer, ML Infrastructure for the Real-Time Bidder of the Ad Engine

Moscow, Russia

SOFTWARE ENGINEER

January 2023 - December 2025

The ad engine is a monolith maintained by hundreds of engineers; it handles millions of RPS and generates the majority of the company's revenue.

The bidder is a technology inside the engine that places bids for banners in the ad auction.

Our small team owns the part of the bidder that uses ML models to place auction bids, allowing advertisers to pay only for conversions (rather than for clicks and impressions).

- C++, Python, SQL, YTSaurus, Docker, Grafana
- Saved **tens of thousands of CPU cores and hundreds of terabytes of HDD** through code optimizations.
- Designed and implemented the feature-computation infrastructure for ML models, increasing ad-system revenue by **a low single-digit percentage**.
- Developed a real-time bid validation mechanism.
- Developed a service-quality metric for the fraudulent-ad filtering service.
- Beyond development, took on the role of "**Reliability and Stability Lead**" for several services, maintaining a 99.99% reliability SLA.

Skills

Programming Languages C++, Python, Rust, Go, Kotlin

Projects

Telegram bot that reminds you of birthdays 📄

- A birthday-reminder Telegram bot that attracted over 2,000 regular users through organic growth alone.

Asynchronous socket-based messenger 📄

- Written entirely in C++ (including the GUI).
- Built the client backend.
- Implemented asynchronous interactions between the client, the GUI, and the server.

Interpreter for the LISP-like programming language "Scheme" 📄

- Paid close attention to code style, correct memory management, and program structure.
- Extended the YSDA test suite for this assignment.

Implementation of smart pointers in C++ 📄

BMP file editor with photo filtering

- Implemented complex filters and a convenient framework for adding new ones.
- Improved on the “typical” solution through more memory-efficient and convenient image storage.
- Covered the entire codebase with tests.

Education

National Research University Higher School of Economics

Moscow, Russia

BSc IN APPLIED MATHEMATICS AND COMPUTER SCIENCE

September 2021 - June 2026

- Computer Science: Distributed Systems, C++, Python, Algorithms and Data Structures, Computer Architecture and Operating Systems, Service-Oriented Architectures, Research Seminar (paper reading)
- Mathematics: Linear Algebra, Machine Learning, Algebra, Probability Theory, Mathematical Statistics

Yandex School of Data Analysis

Moscow, Russia

STUDENT

- Completed courses: C++, Concurrency, Databases
- Current courses: Rust, Go
